Encountered with the global competition in the open economy system, countries are engaged in reorganizing national spatial order and leveling-up the industries to maximize economic profit. In this context, Korea is newly faced with the tasks of building the competitiveness of the national spatial structure and pursuing the balanced domestic development following localization. Accordingly, accomplishing the economic progress to actively cope with the external changes is necessary externally and at the same time devising the new national development policy by reorganizing the economic policies or industrial structure to promote the regional development internally are required.

Under the rapidly changing environment in 7 different policy areas of national spatial development, namely, regional policy, urban policy, land policy, housing policy, transportation policy, construction industry and private capital inducement, the present study examines the plans to overcome the limitations and to build the new national spatial structure. Strategies for the national spatial development applicable to the prospective reunification and the coming 21st century were presented as well.
